

Genome Engineering Seminar Series

Mondays 1:00-2:00 pm EST (Fall 2023)

Via Zoom

Visit gess.hms.harvard.edu for info

Advances in genome editing occur at a blazing speed. We created a virtual seminar highlighting recent research in the field of genome engineering and gene editing.

The primary goals of this series are to:

- 1) keep researchers up to date on recent genome engineering technologies
- 2) provide young scientists (e.g. grad students/post-docs/early investigators) an opportunity to present their work

Our meetings are over Zoom and anyone in the world is welcome to attend. We use the webinar format, but participants can ask the speaker questions. Despite the virtual format, we hope these meetings will stimulate critical discussion and establish new contacts for collaboration.
